
Mimecast for Outlook on Firm PC machines...

From Jenny A. Waley <jwaley@gross-shuman.com>

Hello all,

From time to time, Mimecast for Outlook loses it's mind and wants you to re-authenticate. When this happens, you are presented with choices. For the time being, only utilize the choice "Domain Authentication". You will first need to enter your normal workstation password. Then you will be asked for the code from your 2FA authenticator from DUO. I hope this clears up any confusion.

Authentication Settings

Integrated Windows Authentication

⚠ Account Locked

Cloud Authentication

⚠ Invalid Password

Authenticate

[Forgot your password?](#)

Domain Authentication (Current)

✓ Active

Edit

Your administrator can reset the authentication code available to you.
